PDF Imposition Studio

Turn any PDF into a print-ready booklet, cut-and-stack set, or trimmed file — in Hebrew and English, from your phone.

A print shop in your pocket. Drop in any PDF and turn it into a folded booklet, a cut-and-stack set, or a cleanly trimmed file — built for yeshivah offices, in Hebrew and English.

Open the app

4	HE + EN	3	0
one-tap workflows	full Hebrew & English UI	steps: drop, choose, print	sign-up, install, or cost

From file to finished stack in three steps

1. Drop a PDF
2. Pick one thing to make
3. Export & print

Four workflows, one decision each

No toolbars, no jargon. You answer a single question — *what do you want to make?* — and the app handles the rest.

Booklet (חוברת)

Pages folded in the middle and stapled — like a קונטרס. Page order, imposition, and binding direction handled for you.

Pages to cut (דפים לגזירה)

Copies of every page on one sheet. Print, cut, stack — many copies, fast.

Arrange pages (סידור עמודים)

Drag and drop to reorder, rotate, delete, or add pages.

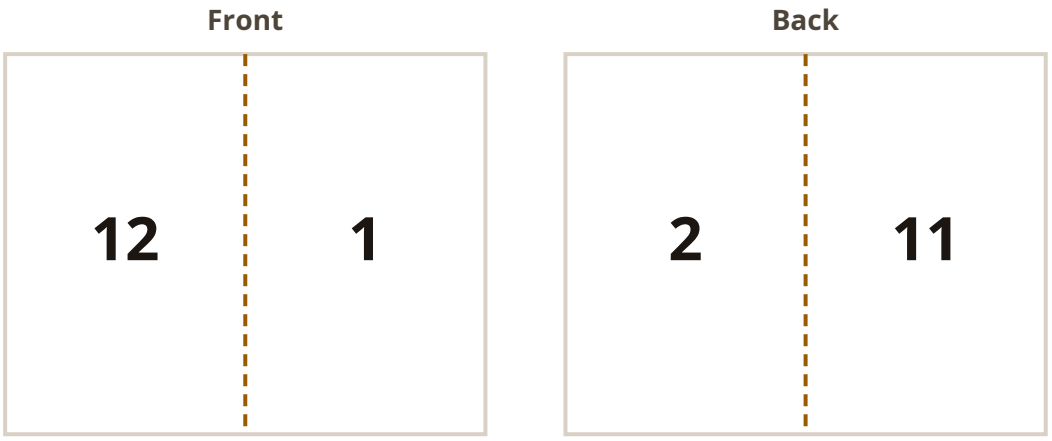

Trim margins (חיתוך שוליים)

Auto-detects the printed area, or drag the crop box yourself. More text on every page.

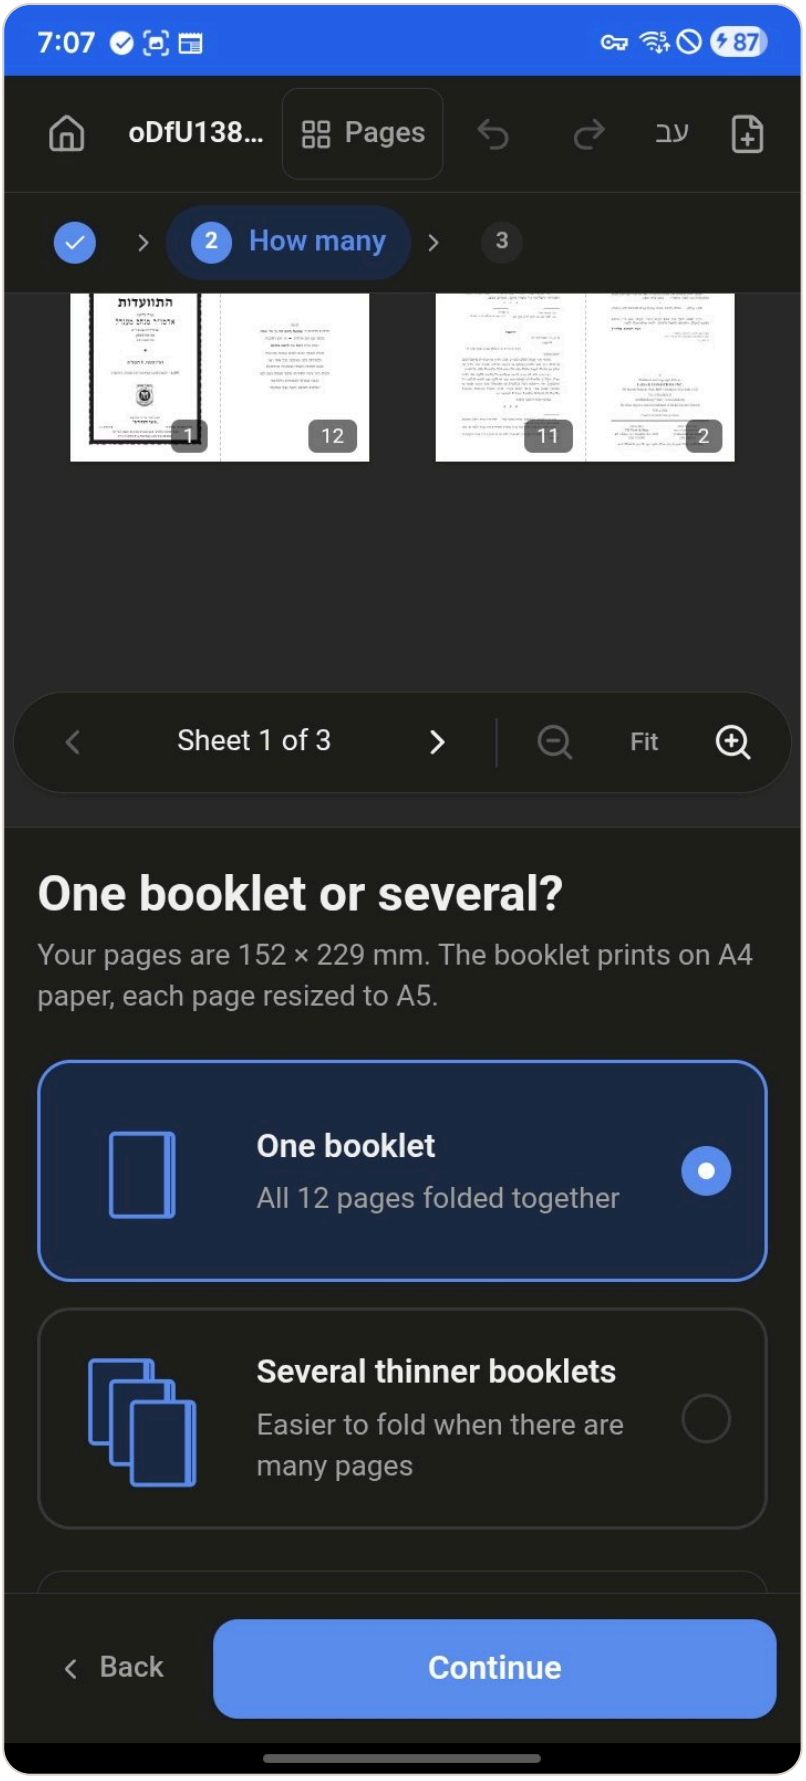

Booklets, done right

A booklet isn't just small pages — the sheets have to be *imposed* so everything lands in order after folding. The app does the signature math for you:

One A4 sheet, printed both sides, folded once — pages land in order.

One booklet or several? Big jobs can be split into thinner signatures that fold cleanly — the same technique real print shops use, as a one-tap choice.

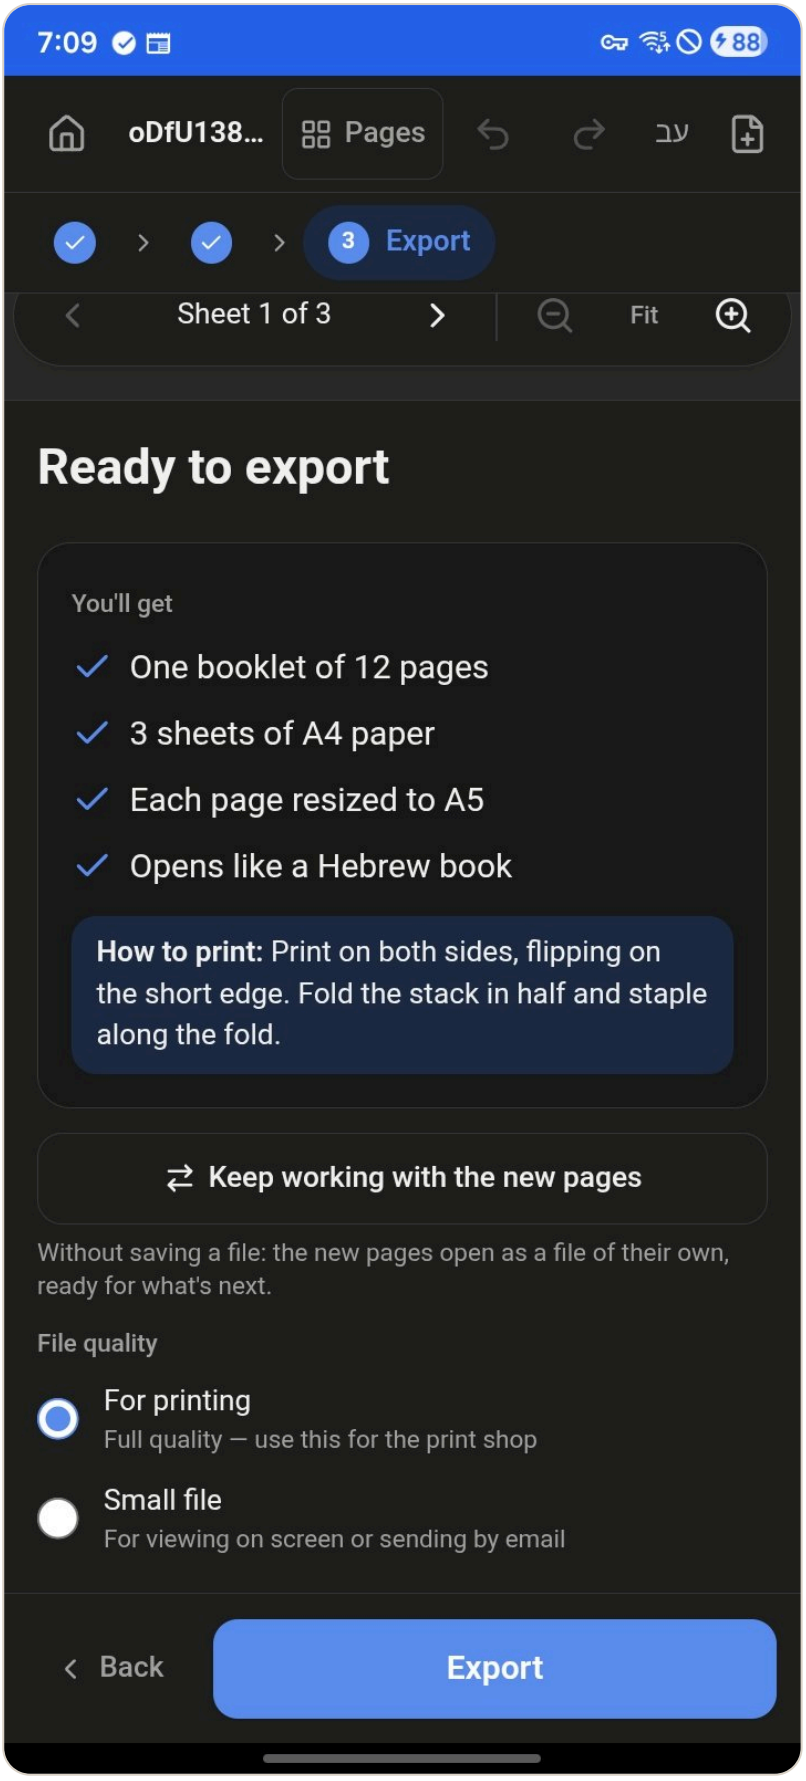

Ready to export

The last screen tells you exactly what you're getting and how to print it — in plain language, not print-shop jargon:

> **How to print:** print on both sides, flipping on the short edge. Fold the stack in half and staple along the fold.

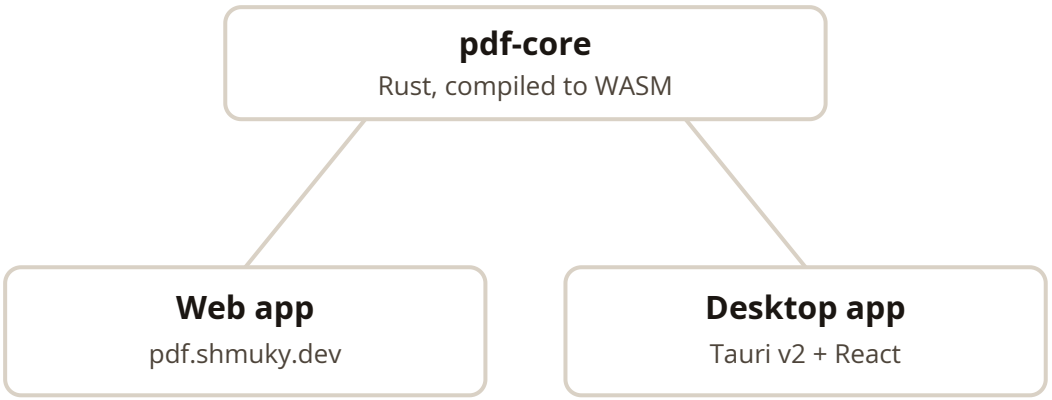

- **Opens like a Hebrew book** — right-to-left binding is built in, not an afterthought.
- **Two quality options** — full quality for the print shop, small file for email or screen.
- **Keep working** — chain operations on the new pages without saving in between.

Made for the yeshivah print room

Someone preparing a קונטרס for Shabbos shouldn't need a graphic-design degree. Every screen asks one question, shows a big accurate preview, and keeps the advanced controls one tap away.

Under the hood

One codebase, two apps — every PDF operation written once.
